

Powerful solutions

Onyx Montenay Power operates and maintains waste-to-energy plants under long-term contracts with strong performance guaranties in cities throughout North America.

Energy recovery provides communities with a safe and environmentally sound method of solid-waste disposal. With more than 20 years of experience in the waste-to-energy field, Onyx Montenay Power assists communities with all aspects of developing and implementing an integrated waste management system, including facility operations, maintenance and retrofitting. We also facilitate the design, construction and financing of these waste management projects.

Operations and maintenance expertise

The Onyx operations and maintenance experience is unsurpassed. With more than 70 waste-to-energy facilities worldwide, Onyx companies operate with virtually every proven state-of-the-art combustion and waste processing technology and air pollution

control system available. This expertise enables us to structure highly capable and efficient operating teams to provide tailor-made, environmentally sound waste management strategies that address local needs and conditions. Our willingness to work with local communities and their specific needs, combined with our ability to accurately project costs, have made us the primary source for “trouble-shooting” and operating existing facilities.

Retrofitting existing facilities

Onyx Montenay Power has expertise in retrofitting and carrying out modifications to existing facilities, large and small, with minimum interruption to incoming waste flows. This enables communities to maintain continuous service to their residents while preserving their investment.

Design, construction and financing

Onyx Montenay Power can help communities simplify the design and construction of new facilities. By working closely with communities, we are able to help finance publicly owned facilities through credit enhancements and long-term guarantees. We can also arrange the financing of privately owned facilities.

Commitment to customers and the community.

At every Onyx Montenay Power facility, we strive for excellence in the scope of operations and maintenance services. We work hard to be a respected and valuable member of the community and above all, we place the highest priority in our safety and environmental programs.

Safety awareness

Onyx Montenay Power is proud to be a member of the United States OSHA Voluntary Protection Program (VPP). Certification and membership with this elite group reflects the commitment to safety by the company and its employees and embraces the ideal that an effective safety program goes well beyond the minimum standard set forth in regulations. Of the more than six million industrial work sites within the United States, less than 2,000 have attained the VPP level of recognition.

Environmental management

Onyx Montenay Power has rigorously sought to ensure that our activities meet the highest standards of environmental protection. In pursuit of this goal, we adopted the ISO 14001 standard of environmental management, and were the first company in the North American waste-to-energy industry to have a facility certified to that standard. As part of this program, we ensure that facilities have equipment and procedures in place to meet all environmental regulations. We continually review our operation to find areas that can be improved beyond environmental regulations.

At Onyx, going “beyond compliance” is a driving force in our corporate culture and quality of service.
